Breathing Room: Skeleton handoff for Jay

Oct 11, 2026 · @Marcus

Verdict: start the skeleton now

Yes, Jay can lock Phase 1 and start the skeleton. Every screen in the demo path already has a working backend behind it, so the wireframes can be built against real data, not guesses. The submission deadline is 14 Oct, 04:59, so build the demo path first and leave the rest as designed-but-not-live.

Demo path, in build order (each step is live today at breathing-room-peach.vercel.app):

1. A1 Landing
2. A2b Type it in + A4 Confirm details (the appeal form)
3. B1 Reasons, then B3 Health & consent gate
4. B5 Draft preview (the letter)
5. C2 Budget, with the new "Fill from my bank" option, and C2b Deficit
6. C1 Link bank
7. C3 Autopilot setup (creditors + approve collection)
8. C4 Autopilot home (status + activity feed), plus a new Pot screen

Camera scan, Today/Notices, the guest flow and the pause sheet should be designed but won't be wired for the demo (section 3).

Screen by screen

Each row is a page Jay needs, what already works behind it, and what the screen must show. "Login" means a Privy email login (email + code); nothing else asks for an account.

Screen	Live today?	Login?	What it shows / collects	States to design
A1 Landing	Yes (basic)	No	Headline, Scan a letter, Type it in, Talk to a person, trust badges	Default only

Screen	Live today?	Login?	What it shows / collects	States to design
A2b + A4 Type it in / Confirm details	Yes	No	Who sent it (council, private parking, police, bailiff, creditor, court), stage of letter, issuer name, contravention code, date of contravention, date of letter, amount, reference	Empty, filled, missing required field
B1 Reasons	Yes	No	Sign was hard to see, Loading/unloading, Emergency, plus "In your own words" text	One question per screen, Not sure, Skip
B3 Health & consent gate	Yes	No	Consent toggle (off by default), then Blue Badge, disability/neurodivergence (own words), caring crisis (own words). Copy: "Leaving this out won't weaken your letter"	Off, on, withdrawn
B5 Draft preview	Yes	No	Full letter text, Copy button, "draft only, not legal advice" line	Loading ("Drafting…", up to ~5s), letter, handoff (bailiff/court letters show advice line numbers, not a letter), error
C2 Budget (SFS)	Yes	Only for auto-fill	Money in (employment, benefits, other, deductions), fixed costs, everyday costs, £5–£25 buffer, creditors (name, priority or not, balance, CCJ). Result: waterfall + split per creditor	Manual, "Fill from my bank" (auto), filled-check-these, result

Screen	Live today?	Login?	What it shows / collects	States to design
C2b Deficit	Yes	No	Shown when what's left is £0 or less: "not your fault", National Debtline 0808 808 4000, Citizens Advice, Breathing Space	Single state; never offers autopilot
C1 Link bank	Yes (TrueLayer sandbox)	Yes	Read-only consent explainer, then TrueLayer's bank picker (demo bank: Mock Bank, login john / doe), then back to the app	Before, connecting (leaves app), connected, failed
C3 Autopilot setup	Yes	Yes	Confirm creditors list, choose how to collect (Direct Debit via GoCardless, or Open Banking via TrueLayer), name + email, Approve in my bank (leaves app, returns)	Choose, approving (leaves app), approved, failed
C4 Autopilot home	Yes	Yes	"Automatic payday collection is on", the monthly surplus amount, "Check for payday now", activity feed (Bank connected → Payday spotted → Collecting → Moved into your pot → Creditors paid)	On, collecting, error in feed
Pot (new)	Partly	Yes	Pot balance in £, what happens next, Withdraw (the contract already supports withdraw any time)	Empty, holding money, paid out
First-visit setup	Yes	Yes	"Setting up your account… a few seconds the first time"	Loading, failed

Design now, not live for the demo

These are worth wireframing now so the skeleton is complete, but there's no backend behind them yet. In the demo, show them as static screens or skip them.

Screen	Why it's not live	What it would need
A2 Camera scan + A3 Reading	Letter reading (OCR) isn't wired	A vision call that fills the A4 fields; low-confidence fields flagged
A5 Save progress	Login currently happens only at money features	Passkey / magic link step after first triage
D1 Today + D2/D3 Notices	Notices aren't stored anywhere yet	A notices list per user with deadlines and status
D4/D5 Council reply + outcome	Same as above	Scan reply, mark Won / Lost / Plan
B4 Discount risk	Needs the notice's stage and day count stored	Informal vs formal stage, days since notice
B6 Export sheet	Only Copy works today	Open in Mail, Copy + open council website, Download PDF
C5 Pause this month	No pause switch yet	One flag that skips the next collection
C6 Creditor push	Not built	1-tap letter from the creditor template (a creditor letter already exists in B5)
E0–E3 Guest flow	Not built	Share link + 4-digit code, e-sign, 7-day expiry
Bank re-link	Bank consent lasts 90 days	Gentle "reconnect your bank" prompt before expiry
Quick exit + discreet icon	Not built	Button that jumps to a neutral page; app name/icon option

Rules for every screen

- **Never crypto words.** Say pot, set aside, pay out, receipt. Never wallet, token, gas, contract, chain or MON. The app already follows this; keep it in the wireframes.
- **Money in pounds, as outcomes.** "£35 now, £70 after", not percentages or tables (Jay's own rule).

- **Leaving the app is normal.** Bank linking and approving collection both open the bank's or provider's page and come back. Design a clear "you'll be taken to your bank" step before, and a "welcome back" state after.
- **Every screen needs loading and error states.** First visit takes a few seconds (account setup), letter drafting up to ~5s, bank reads a few seconds.
- **Talk to a person is always one tap away**, and bailiff/court letters and deficit budgets route there instead of a dead end.
- **Judge-visible line.** One small footer on money screens: "Payments settle on Monad. Automation by Chainlink. Accounts by Privy." Users can ignore it; judges need it.

Answers to Jay's 5 questions

1. **Scan before sign-in?** Yes. Privy and compliance don't need the user identified to draft a letter or do a manual budget; both already work logged out. Login is only needed for bank linking, auto-fill and autopilot.
2. **v1 scope?** Product call for the team. The letter engine already handles council PCNs (informal and formal, Traffic Management Act 2004), private parking (Protection of Freedoms Act 2012, POPLA/IAS), creditor payment-plan letters, and hands bailiff and court letters to an adviser.
3. **The pot?** Money sits there only from payday landing until the next automatic check, up to about 2 minutes, then pays out. The user can withdraw any time (the contract has an owner-only withdraw). So yes, a Pot balance screen is needed.
4. **Crisis triggers?** Today: a bailiff or court letter, or a budget at £0 or less, shows the adviser route as a non-blocking message. Blocking takeover vs banner is Jay's call.
5. **Home model?** Jay's call. Note for the demo: Today/Notices has no backend yet, so whichever home he picks will be static in the demo.

Budget auto-fill uses 3 months. Auto-fill reads the last 90 days of bank transactions and averages them to a monthly figure, which smooths irregular income (gig work, varying shifts). The C2 screen should say "based on your last 3 months".
